

Then the trigonometry, you just hit the lead rock 15.657 degrees off center with a force of 12.32 Newtons and it nudges your other rock into the centre.

He gets the whole ice polishing thing, it's scientific, all about adjusting the coefficient of friction on a moving mass...

But birthdays aren't about science, their about food and friends!

From your Quorum buddies

That Hale, He's a real keen leaners!
